

Welcome to Ilkley Station Layout in T gauge 1.450 scale

The Ilkley layout came around whilst I was wondering what I could do on a single 1 foot by 8 foot exhibition board with a small fiddleyard which can easily be transported by car.

This layout was conceived in June 2016 but only got started in late 2018 as I was still working on my other layouts.

I first obtained an aerial shot from Google Maps in order to get sufficient detail to make the layout a bit more special. The photo and modified for use with T-Gauge standard set-track parts.

As you can tell by looking at the plan this is a 6 siding layout in which the two at one

end are the platforms and the other four are then for the fiddleyard. Four working train units can be operated at full peak. All sidings are HST set size so no problem if you want a special train to roll into any platform.

Buildings and surrounding station area were produced using my 3D printer as I wanted to practice my drawing skills. Some of these is now on the Shapeways web site for buying in T-Gauge 1.450 scale only.

What's on the layout

- Various 3D printed and station buildings and scenery.
- Over 100 trees (average size of 35mm).
- Different types of vehicles including a pair of Fire Engines with flashing blue lights.
- Set track including 6 turnouts with 4 sidings on the fiddle yard and 2 platforms on the scenery board.

If you would like to hire this layout for your exhibition or show it needs provisions of car hire + fuel. Insurance for the layout is £1000.00 excluding rolling stock and it requires 2 operators plus lunch. If over 60 miles from Bradford West Yorkshire accommodation with breakfast will be required. The layout will only require a UK Standard 13A socket; power is minimal
